

# EFCORE 7: BULK UPDATE

```
var orders = context.Orders
    .Where(b => b.IsCancelled);

foreach(var order in orders)
{
    context.Remove(order);
}

context.SaveChanges();
```

```
context.Orders
    .Where(b => b.IsCancelled)
    .ExecuteDelete();
```

# GENERATED SQL

EFCore translated the LINQ expression to SQL for execution at the database, just as if you were querying those Blogs out

```
context.Orders
    .Where(b => b.IsCancelled)
    .ExecuteDelete();
DELETE FROM [o]
FROM [Orders] AS [o]
WHERE [o].[IsCancelled] = TRUE
```
